Five-star treatment with Instant On

The fast, secure, and reliable
Wi-Fi solution

Hewlett Packard
Enterprise

The hospitality world is constantly evolving as is its use of technology. From the smallest B&Bs to the hottest boutique hotels, smart technologies, and guests' expectation of their performance, are having a tremendous impact on the industry. It's clear that slow connections or poor coverage can knock down a 5-star rating.

With HPE Networking Instant On, you can meet the needs of your guests and staff to deliver VIP treatment. Automate guest interactions and increase customer satisfaction while reducing points of friction and labor costs.

Stay on the right side of digital transformation with fast, secure, and reliable connectivity. Let's look at a few of the ways Instant On is primed to help.

Frictionless hotel connectivity

Hotel infrastructure can be hindered by choosing the wrong networking equipment. Fortunately, there's no reason for bad connectivity to hamper your operation. Provide smooth transactions, touchless check-ins and check-outs, and swift connectivity that extends throughout your premises — even outdoors.

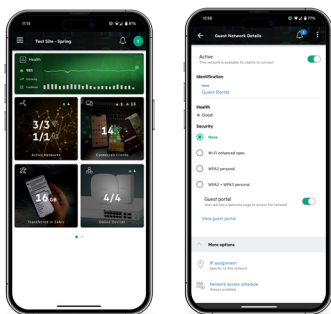

With Instant On Smart Mesh technology, Wi-Fi dead zones checked out long ago. Extend coverage to every corner of your facility, including outdoors, with comprehensive coverage for your employees and guests. Instant On supports easy transactions, digital room keys that always work, and the capacity to support large gatherings.

With Instant On, you can easily deliver dynamic services to guest rooms and throughout your facility — without overwhelming your network. Customize your guest portal to further engage your customers. For businesses occupying multiple floors, requiring multiple access points, pan-tilt zoom cameras, and even smart TVs, the Instant On 1960 stackable switch extends bandwidth where you need, providing 10G uplink ports that ensure reliable wired connectivity. And all this can be installed, managed, and troubleshot by your non-technical staff using our mobile app.

Enhance guest experience

A robust Wi-Fi network in hotels is essential for both business travelers and leisure guests. It allows business travelers to stay productive by staying connected to work emails and attending virtual meetings. Leisure guests rely on Wi-Fi to keep in touch with family, access tourist information, and share experiences on social media. A reliable Wi-Fi connection enhances the overall guest experience, enabling seamless communication and easy access to information, making the stay more enjoyable for all guests.

Instant On Mobile App

Secure sensitive guest data

Smart technology can aggregate guest data and make it accessible and actionable to deliver better service and business results. However, access to that data comes with the responsibility to handle it securely — whether or not you have a dedicated cybersecurity specialist.

Instant On has built-in security to help ensure your network isn't left vulnerable to malware attacks. Using the mobile app, you have ultimate control — get visibility into every connected device, control who is connected with VLANs and ACLs, and separate employee and guest traffic for further protection. You can add an extra layer of security with the HPE Networking Instant On Secure Gateways.

A partner and solution you can trust

Instant On gives hospitality providers fast, secure and reliable Wi-Fi solutions that keep staff and guests happy. Ensure everything from Netflix to security cameras work together seamlessly with a solution purpose-built for the needs of hospitality.
